

Design/Build and Installation:

Design/Build Services-

We offer a wide variety of plans from simple foundation plantings and garden sketches to full-blown master plans. Hardscapes such as patios and walkways made of brick or stepping-stones are also available.

Installation-

All landscape installations performed by Encore Garden Group use proper planting techniques suitable for each plant and space. We use quality plant materials from reliable, local resources. Because of this, we offer optional plant replacement guarantees for a reasonable price.

Irrigation-

All irrigation systems are properly installed with a view to easy maintenance and routine care. Properties are carefully measured and systems are specifically designed to ensure that matched precipitation falls evenly on all areas of the lawn and planting areas.

Landscape Lighting-

Would you like to add beauty, value and security to your property? We use premium grade lighting components in all styles, from traditional to contemporary. We design, wire and guarantee landscape lighting systems which can include spot lights, pathway lights, area lights, flood lights and more.

Seasonal Color-

Adding a seasonal variety of colorful annuals has a lot of impact on the curb appeal of your property. We add organic matter and fertilizer to the planting bed before planting annuals according to the season and the client's taste. We also follow up with mulch or pine straw for weed prevention.
