

A LITTLE BIT MORE INFORMATION.....ON MULTIROOM AUDIO

Sonos

Sonos puts the control of all your music and all your rooms right where it should be — in your hands. With the touch of a finger you can find and play a world of music, whether it's streaming direct from the Internet or stored on your computer. Tune in to your favourite radio station or browse through your entire music library. You can play the same song in every room or choose different songs for different rooms. That's why Sonos created a wireless mesh network called SonosNet to deliver the range and performance required of a multi-room music system. When you need to stream music wirelessly, the network you use really matters. When a network is overloaded or stretched to its limits, you hear echoes and delays from room to room, and your Internet speed can be sluggish. Sonos chose a mesh network because a traditional network with a central hub relaying all the traffic didn't provide the house-wide coverage needed. SonosNet changes all that — providing the extensive range and superior performance you need to enjoy music in every room without requiring a new cable infrastructure

Zone Players & Controllers

ZonePlayers™ are wireless music players that distribute and play all the music you want, all over your house. ZonePlayers can go in absolutely any room where you want music — either connected to speakers (ZP120), to your existing audio equipment (ZP90), or on its own (S5). You can have a up to a maximum of 32 Zoneplayers throughout your home which can be discretely installed within roof spaces or ceiling voids The Sonos Controller 200 is a wireless, handheld Controller with a 3.5" full-colour VGA display and ultra-responsive touch screen. Pick it up or touch the screen and it's instantly on, ready to play your music. You can quickly find and play all your music and control all your ZonePlayers with the touch of a finger. Sonos Controllers are not tied to a specific ZonePlayer, so you can use any Controller to control the music — and the volume — in every room of the house.

The Sonos Controller for iPhone is a free application that turns your iPhone (or iPod touch) into a full-fledged Sonos Controller. Plus, it fits in your pocket so you can carry it with you all over the house.

Access all your music instantly

There are 3 main ways of accessing music through Sonos.

You can store all of your CD's onto a separate NAS Drive and scroll through your entire library to play in any room effortlessly.

Enjoy thousands of free radio stations and podcasts over the internet

Subscribe to an Online Music Service such as Napster and enjoy a library of 10 million songs to stream direct to any room at any time of day

Nuvo

Nuvo offers unsurpassed multiroom audio systems incorporating a perfect balance of high quality and affordability. Their amplification systems have been available for some time, albeit to the extremely high end client but now using engineers with strong music industry backgrounds, NuVo have created audio solutions that experts like these would have in their homes.

Grand Concerto

Six Sound Source, Eight Listening Zones

Nuvo's latest masterpiece is an elegant, intelligent whole home audio system that combines our proven performance and the industry's most innovative technology with class. With Elegant OLED Display for high readability in any light and up to 8 lines of text. Innovative Capacitive Touch Interface – a first in this industry segment. Intelligent navigation communicates directly with NuVoNet2 for smart feedback. With control like this, you may never leave the house.

Essentia E6G

Six Sound Sources, Six Listening Zones

The Essentia delivers the startlingly clear sound of NuVo from up to six different sources, and to six different listening zones in the house. It's diverse, expandable, and surprisingly affordable. And now, Essentia is the first whole home audio system to earn the Energy Star logo – consuming less than 1 watt of power while in standby mode.

Essentia E6G includes a stunning new control pad interface, with OLED display providing full metadata feedback. Coplanar buttons provide a smooth, clean finish with the overall polycarbonate surface, making the entire control pad water-resistant.

Utilizing the same NuVoNet interface as Grand Concerto to provide full data feedback from any NuVo source unit, the Essentia Suite is a harmonious solution that's simple to install and afford.

Essentia features Philips Class D digital audio amplification to deliver clear, precise sound throughout your home, which adds energy efficiency while running. It's like no other multi-source system on the market.

Control Pads

There are a variety of control pad options available with different bezel finishes to compliment your home

Music Port Server

With the new Music Port Server, NuVo offers the ultimate in variety and convenience for whole home audio.

The Music Port Server means more choice and more control. Consolidating networked computers' digital audio content from iTunes and Windows Media Player into a single, easily navigated library, Music Port Server provides unrivalled access to your home's music collection.

Additionally, the Music Port Server opens a system up to streaming audio from online sources such as Spotify and Internet Radio. Operation is simple through any of NuVo's control options, including a sleek client software interface. And when coupled with NuVo's Colour Touch Pad, control reaches new heights with full-colour album art and the ability to rate songs and build custom channels for a music experience as unique as the listener.

Systemline

Systemline is a multi-room entertainment system with the ability to access and control audio and video equipment independently in every room. Everything you'll need is at your fingertips, via stylish, intuitive keypads or remote controls, while exceptional high performance audio is delivered through discreet speakers.

This Modular Home Entertainment system is the least intrusive Multi-room system ever devised. Perfect for so many homes from single occupancy, one bed apartments, right up to six bedroom detached houses with large families.

Consultation

Systemline Modular is only available through trained, authorised installers. Carbon13 will guide you through the planning of your system, providing guidance on the best speaker and control options to suit your home and proposed usage. Multi-room systems need to be a lifestyle enhancement to your property, so you have minimal disruption & the full benefit of a quality, discrete solution.

Installation

Having guided you through the planning of your system, the installation of the cabling can now take place (first fix). Completion time of this will depend on the proposed system specification & whether the property is a new build or retro-fit installation. Carbon13 will take into consideration future technology developments and may make provision for extra cabling to "Future Proof" the system as much as possible.

Commissioning

The second fix phase of the installation involves the fitting of keypads, touch screens and source equipment (music servers, Sky, CD players etc) & programming these to work seamlessly with the elegant Systemline controls. Once we have fully tested the system, you will have an induction on how it works. This is your opportunity to get a feel for the simplicity of the system and benefit of having multi-room over DVD players and radios in different rooms in the house. The products have a two year warranty and Carbon13 will be on hand to support you if required.

Integration

Systemline Modular works with discreet in-ceiling or on-wall speakers, combined with stylish keypads, and will result in virtually no intrusion into your living space. Therefore no more stacks of unsightly hi-fi separate boxes, room cluttering speakers and irritating cables. Systemline Modular offers a unique collection of keypads including the colour TouchScreen - which epitomise elegance and simplicity, for effortless instantaneous control. Each keypad is available with a selection of finishes to complement your individual rooms. Our typical recommendation for most rooms is a pair of on-wall or in-ceiling speakers. Single speakers are recommended in smaller rooms such as bathrooms. Infrared speakers are ideal for rooms where keypads are not required. The IR function allows full control of your system and connected equipment using the ultra stylish, fully functional remote control.
